THE ELM ST. SCHOOL LAND WAS NOT  
LAND COURTED. AT THE TIME OF THE  
SALE HARLAN TUTTLE MADE A PLAN  
OF THIS LAND. THIS IS THE ONLY  
PLAN SHOWING THE BOUNDARIES. THE  
PLAN IS NOT TO LAND COURT STANDARDS  
AND THEREFORE NOT "EXACT"

Inter-Departmental Communication

DATE: November 2, 1966

FROM: Building Committee  
TO: Board of Selectmen  
SUBJECT: Legal advice on School Land.

26  
The Building Committee would like the Board of Selectmen to have Town Counsel advise us whether or not the land for the Elm Street School complex purchased from Mr. Flerra went through land court, and also to give us the exact boundaries of the land at Arlington Street.

Engineering Dept.

Can you answer the above and supply the plan? Thank you

JAT.

**TOWN OF ACTON**

**Inter-Departmental Communication**

DATE: October 15, 1964

FROM: John Rowd, Town Engineer

TO: Board of Health

SUBJECT: High water elevation of Fort Pond Brook at Arlington Street

This note is to confirm our findings in the field on Tuesday, October 13, 1964.

After a three day storm in October 1962, this department painted blue marks on culverts throughout the town, 1'0" above the high water at that time. Mr. Robert E. Lautzenheiser, Weather Bureau State Climatologist, puts this storm in the category to be expected once in 100 years plus.

On October 13, 1964, Bob Heustle and I ran levels to determine the elevation of the blue mark on the Arlington culvert of Fort Pond Brook. Using the bench mark on the spindle of the hydrant on the lot line between Lots #1 and #2 of the Houghton Park Subdivision, we found the blue mark on the Northwest end of said culvert to be elev. 202.7. This would make the elev. of high water 201.7.
